

## AEM TASK – 6

### Custom AEM Setup Documentation

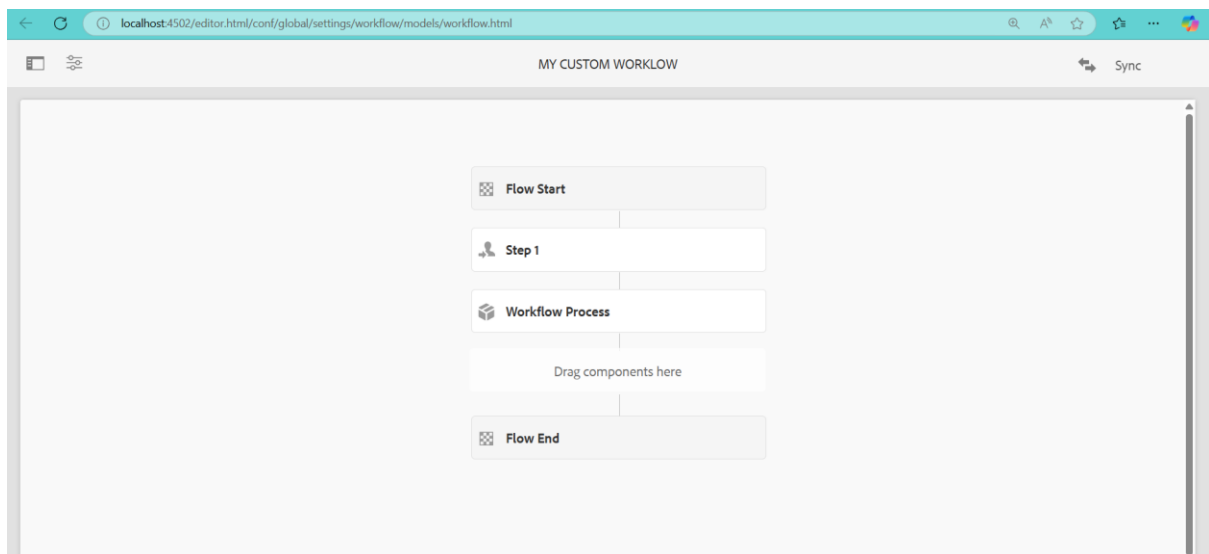

#### Created a Custom Workflow

- Clicked **Create Workflow Model**.
- Named it **My Custom Workflow**.
- Added a **Process Step**, configured, saved, and activated it.

#### Implemented a Custom Workflow Process

- Developed a process step to log the page title.
- Deployed the process and executed the workflow on a page.

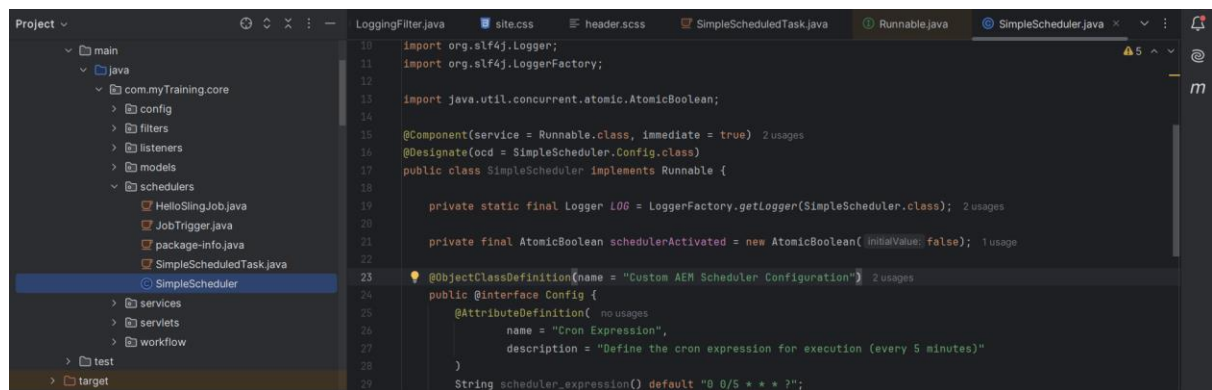

## Created an Event Handler

- Implemented an event listener for ResourceChanged events.
- Deployed the listener to log modified resource paths.
- Verified the logs when a resource was modified.

## Set Up a Scheduler (Runs Every 5 Minutes)

- Implemented a scheduled task using a cron expression.
- Deployed the scheduler.

## Configured Users and Groups

### Created Users

- Navigated to **Tools > Security > Users**.
- Created three users (user1, user2, user3).

<div><input type="checkbox"/></div> <div></div> <div>user3</div>		user3	Enabled	N/A	Not Published

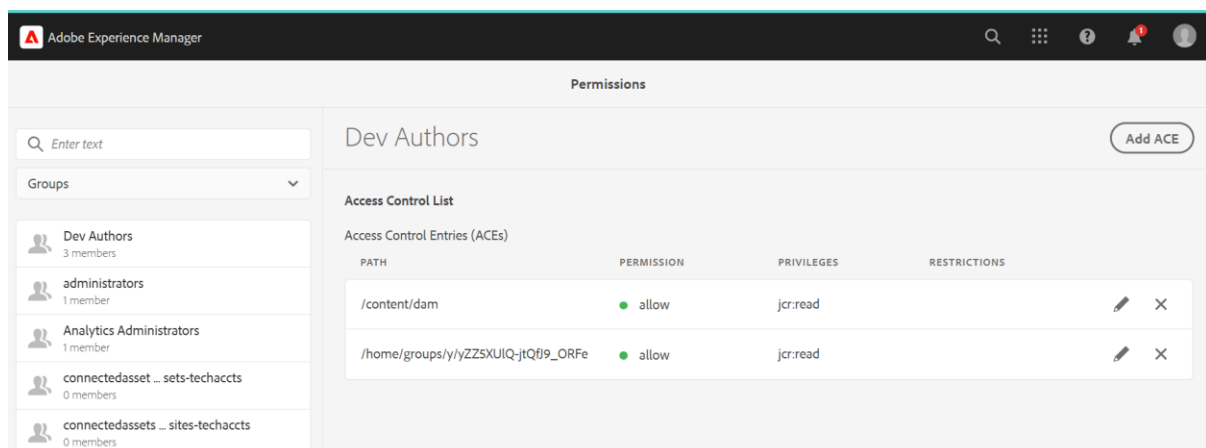

## Created a Group

- Navigated to **Tools > Security > Groups**.
- Created a new group (Dev Authors).
- Added the three users to this group.

## Assigned Permissions

- Went to **User Administration > Permissions**.
- Assigned **Read** access for /content and /dam.
- Granted **Replication Access** to the group.

## **Final Step: Verification**

- Successfully ran workflows, triggered events, and checked logs.
- Confirmed scheduled jobs executed as expected.
- Verified user permissions and replication access.
